INSTALLATION

TVM THAT DISPENSES AND RECYCLES OBJECTS

ODM is designed for the issue of containers/boxes; in particular, on-site ODM dispense devices called OBUs (On Board Units), which are necessary for the payment of an ECO fee in Belgium. Users can also return the OBU via the ODM. This is a versatile but also strong solution. Adaptable for outdoor installations, the ODM can be equipped with a protective shell that makes it resistant in adverse environmental conditions. Recirculation systems are intelligent solutions for ensuring a high level of availability and efficiency.

SPECIFICATIONS
